Physical Vapor Deposition (PVD)
Pvd is a field in the application of nanotechnology. The process consists of depositing layers of atoms, inside a vacuum chamber, to a solid surface. The layering is produced by the condensation of a vaporized metal (such as gold, titanium, platinum etc.) over the selected surface. Advantages: High resistance to abrasion and scratches; much higher than metals applied by Firing. As a general rule, any non-agressive, pH neutral product have to be used. Do not mix pieces from different lots.
El PVD es uno de los campos de aplicación de la nanotecnología. El proceso consiste en depositar capas de átomos, en una cámara de alto vacío, sobre una superficie sólida. El recubrimiento se produce por la condensación de un metal vaporizado, oro, titanio, platino, ect. sobre el material a recubrir. Ventajas: Mayor resistencia al rayado y a la abrasión que los metales aplicados por cocción. Para la limpieza de estos materiales deben utilizarse productos no agresivos con pH neutro. No mezclar piezas de diferentes lotes.

Special Product: Due to hand-manufactured process the caliber and tonality of these pieces could vary from one to other.Clean only using neutral PH products. Do not mix pieces from different lots.
Producto Especial: Este material se fabrica artesanalmente, por lo que pueden existir variaciones en el calibre o en el tono.Usar para su limpieza únicamente productos con PH neutro. No mezclar piezas de diferentes lotes.
